# PHYSICAL ACTIVITY 

Fieldwork: October-December 2002
Publication: December 2003
Special Eurobarometer 183-6 / Wave 58.2 - European Opinion Research Group EEIG
This survey was requested by Directorate General Health and Consumer Protection and coordinated by Directorate General Press and Communication

This document does not represent the point of view of the European Commission.
The interpretations and opinions contained in it are solely those of the authors.

This public opinion survey was carried out at the request of the Directorate-General Health and Consumer's Protection and was managed and organised by the Public Opinion Analysis Sector of the Directorate-General Press and Communication.

It was conducted in all the Member at States of the European Union between October 28 and December 8, 2002, under the general coordination of the European Opinion Research Group EEIG. in Brussels.

The technical specifications, the names of the institutes involved in the research and the questionnaire are annexed.

The European Commission accepts no liability of any kind arising from this report.

The original language of this report is English.

## GENERAL INTRODUCTION

Between $28^{\text {th }}$ October 2002 and $8^{\text {th }}$ December 2002, the European Opinion Research Group, a consortium of Market and Public Opinion Research agencies, made out of INRA and GfK Worldwide, carried out wave 58.2 of the Standard Eurobarometer, on request of the European Commission, Directorate-General Press and Communication, Public Opinion Analysis Unit.

The following topics are covered in this wave:
$\checkmark$ Health (Q.1-71)
$\checkmark$ Developing Countries (Q.72-79)

Standard Eurobarometer surveys cover the population of the respective nationalities of the European Union member states, aged 15 years and over, resident in each of the member states. The basic sample design applied in all member states is a multi-stage, random (probability) one. In each EU country, a number of sampling points is drawn with probability proportional to population size (for a total coverage of the country) and to population density.

For doing so, points are drawn systematically from each of the 'administrative regional units', after stratification by individual unit and type of area. Hence, they represent the whole territory of member states according to EUROSTAT NUTS 2 (or equivalent) and according to the distribution of resident population of the respective EU nationalities in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address is drawn at random. Further addresses are selected as every $\mathrm{N}^{\text {th }}$ address by standard random route procedures, from the initial address. In each household, respondent is drawn at random. All interviews are face-to-face in the respondent's home and in the appropriate national language.

## 1. Prevalence of Physical Activity

### 1.1. General Situation in the Oean Union

Physical activity in the Member States was assessed using the "International Physical Activity Questionnaire" (IPAQ). The goal of the IPAQ is to allow a cross-cultural comparison of physical activity parameters. The IPAQ measures the frequency, duration, and level of intensity of physical activity in the last 7 days.

The frequency of physical activity is measured by the question "In the last 7 days, on how many days did you do [...] physical activities?". The duration is measured by the question " On days you do [...] physical activity, how much time do you usually spend at it?".

To assess the level of intensity of physical activity, these questions are asked for vigorous and moderate physical activities, walking, and sitting. Questions do not distinguish between contexts of physical activity, they thus measure all types of physical activities that were performed by an individual in the last 7 days.

Table 1. Vigorous physical activity in the last 7 days
Q.50: In the last 7 days, on how many days did you do vigorous physical activities like lifting heavy things, digging, aerobics or fast cycling?

|  | \% EU 15 |
| :--- | :---: |
| None | 57.4 |
| 1 day | 7.9 |
| 2 days | 9.1 |
| 3 days | 7.2 |
| 4 days | 3.5 |
| 5 days | 5.5 |
| 6 days | 2.0 |
| 7 days | 6.1 |

Within the European Union, more than half of respondents (57.4\%) reported no vigorous physical activity in the last 7 days. $7.9 \%$ reported 1 day of vigorous physical activity, and 9.1\% reported 2 days of vigorous physical activity in the past week.

Table 2. Time spend on vigorous physical activity in the last 7 days
Q.51: On days when you do vigorous physical activities, how much time do you usually spend at it?

|  | \% EU 15 |
| :--- | :---: |
| Did not do any vigorous physical activities in the last 7 days | 60.7 |
| 30 minutes or less | 4.2 |
| 31 to 60 minutes | 14.7 |
| 61 to 90 minutes | 4.6 |
| 91 to 120 minutes | 9.7 |
| More than 120 minutes | 3.5 |
| DK | 2.6 |

When asked, how much time they usually spend on an average day doing vigorous physical activities, more than $60 \%$ ( $60.7 \%$ ) reported doing no vigorous physical activity. The average time of vigorous physical activity bouts is 30 minutes or less for $4.2 \%$, up to 60 minutes for $14.7 \%$, up to 90 minutes for $4.6 \%$, up to 120 minutes for $9.7 \%$ and more than 120 minutes for $3.5 \%$.

Table 3. Moderate physical activity in the last 7 days
Q.52: In the last 7 days, on how many days did you do moderate physical activity like carrying light loads, cycling at a normal pace or doubles tennis? Please do not include walking.

|  | \% EU 15 |
| :--- | :---: |
| None | 40.8 |
| 1 day | 6.4 |
| 2 days | 11.3 |
| 3 days | 8.5 |
| 4 days | 5.2 |
| 5 days | 7.2 |
| 6 days | 3.3 |
| 7 days | 15.4 |

For physical activity of moderate level of intensity, $40.8 \%$ of respondents reported no such physical activity in the past week. More than $15 \%$ ( $15.4 \%$ ) reported doing moderate physical activity every day in the past week, and $11.3 \%$ reported doing moderate physical activity on 2 days in the past week.

Table 4. Time spend on moderate physical activity in the last 7 days
Q.53: On days when you do moderate physical activities, how much time do you usually spend at it?

|  | \% EU 15 |
| :--- | ---: |
| Did not do any vigorous physical activities in the last 7 days | 47.1 |
| 30 minutes or less | 10.1 |
| 31 to 60 minutes | 18.5 |
| 61 to 90 minutes | 4.2 |
| 91 to 120 minutes | 11.7 |
| More than 120 minutes | 3.5 |
| DK | 5.0 |

Time spent on moderate physical activity reported was 30 minutes or less for about $10 \%$ ( $10.1 \%$ ), up to 60 minutes for $18.5 \%$, up to 90 minutes for $4.2 \%$, up to 120 minutes for $11.7 \%$, and more than 120 minutes for $3.5 \%$.

Table 5. Walking for at least 10 minutes in the last 7 days
Q.54: In the last 7 days, on how many days did you walk for at least 10 minutes at a time?

|  | \% EU 15 |
| :--- | :---: |
| None | 17.1 |
| 1 day | 5.4 |
| 2 days | 9.0 |
| 3 days | 7.9 |
| 4 days | 6.0 |
| 5 days | 8.9 |
| 6 days | 4.9 |
| 7 days | 39.0 |
| DK | 1.8 |

Only $17.1 \%$ of respondents reported not to have walked for at least 10 minutes at a time in the past week. Walking for at least 10 minutes at a time on every day in the past week was reported by $39 \%$ of respondents.

Table 6. Time spend walking on a usual day
Q.55: On days when you walk for at least 10 minutes at a time, how much time do you usually spend walking?

|  | \% EU 15 |
| :--- | :---: |
| Did not do any walking for at least 10 minutes at a time | 21.0 |
| 30 minutes or less | 37.5 |
| 31 to 60 minutes | 21.8 |
| 61 to 90 minutes | 5.8 |
| 91 to 120 minutes | 6.2 |
| More than 120 minutes | 1.6 |
| DK | 6.1 |

The average time spent walking was reported to be up to 30 minutes by more than one third of respondents ( $37.5 \%$ ), up to 60 minutes by $21.8 \%$, up to 90 minutes by $5.8 \%$, up to 120 minutes by $6.2 \%$, and more than 120 minutes by $1.6 \%$.

For sitting, the majority of respondents reported to sit between 1.3 hours to 5.3 hours on a usual day.

Table 7. Time spend sitting on a usual day
Q.56: How much time do you spend sitting on usual day? This may include time spent at a desk, visiting friends, reading, studying or watching television?

|  | \% EU 15 |
| :--- | :---: |
| Less than 1 hour | 1.9 |
| From 1 hour to 1.30 hours | 4.5 |
| From 1.31 hours to 2.30 hours | 10.3 |
| From 2.31 hours to 3.30 hours | 13.9 |
| From 3.31 hours to 4.30 hours | 14.5 |
| From 4.31 hours to 5.30 hours | 11.3 |
| From 4.31 hours to 5.30 hours | 10.6 |
| From 5.31 hours to 6.30 hours | 5.2 |
| From 6.31 hours to 7.30 hours | 8.5 |
| From 7.31 hours to 8.30 hours | 8.7 |
| More than 8.30 hours | 4.6 |
| DK | 6.2 |

### 1.2. Prevalence of Physical Activity by Age

If reported days of vigorous physical activity in the past week were compared across age groups, older people reported to about $80 \%$ ( $79.6 \%$ ) no vigorous physical activity in the past week. For the younger age groups, this rate dropped to $43.1 \%$ among respondents being 15-25 years of age.

Table 8. Days of vigorous physical activity in the last 7 days by age

|  | $\mathbf{1 5 - 2 5}$ <br> years $\%$ | $\mathbf{2 6 - 4 4}$ <br> years $\%$ | $\mathbf{4 5 - 6 4}$ <br> years $\%$ | $\mathbf{6 5 +}$ <br> years $\%$ |
| :--- | :---: | :---: | :---: | :---: |
| None | 43.1 | 49.9 | 60.4 | 79.6 |
| 1 day | 9.8 | 8.4 | 7.9 | 5.0 |
| 2 days | 12.9 | 10.7 | 7.8 | 4.8 |
| 3 days | 11.8 | 8.2 | 5.8 | 3.3 |
| 4 days | 5.6 | 4.0 | 2.8 | 1.5 |
| 5 days | 6.3 | 7.7 | 5.1 | 1.4 |
| 6 days | 2.4 | 2.8 | 1.8 | 0.5 |
| 7 days | 6.5 | 6.8 | 6.9 | 3.1 |
| DK | 1.5 | 1.4 | 1.4 | 0.8 |

Time spend on vigorous physical activities in the last week decreased with age. Of those being 15-25 years of age, $14.5 \%$ reported bouts of vigorous physical activity of 91 to 120 minutes, for $26-44$ years olds this rate is $10.7 \%$, for $45-64$ years old this rate is $8.9 \%$, and for those 65 years of age and older this rate is $4.5 \%$, respectively.

Table 9. Time spend on vigorous physical activity in the last 7 days by age

|  | $\mathbf{1 5 - 2 5}$ <br> years \% | $\mathbf{2 6 - 4 4}$ <br> years \% | $\mathbf{4 5 - 6 4}$ <br> years \% | $\mathbf{6 5 +}$ <br> years\% |
| :--- | :---: | :---: | :---: | :---: |
| No vigorous physical activities | 46.5 | 53.9 | 63.8 | 82.0 |
| 30 minutes or less | 4.4 | 5.7 | 3.5 | 2.3 |
| 31 to 60 minutes | 17.8 | 18.1 | 14.5 | 6.0 |
| 61 to 90 minutes | 8.8 | 5.0 | 3.6 | 1.4 |
| 91 to 120 minutes | 14.5 | 10.7 | 8.9 | 4.5 |
| More than 120 minutes | 4.8 | 3.5 | 3.4 | 2.5 |
| DK | 3.1 | 3.1 | 2.5 | 1.3 |

For moderate physical activity, a similar decrease of participation could be observed. One third ( $33.1 \%$ ) of those being $15-25$ years of age did not report any moderate physical activity in the past week, for those being 65 years of age and older, this rate was $55.9 \%$. However, the rate of
those that report daily physical activity of moderate intensity remained relatively stable across age groups.

Table 10. Days of moderate physical activity in the last 7 days by age

|  | $\mathbf{1 5 - 2 5}$ <br> years $\%$ | $\mathbf{2 6 - 4 4}$ <br> years $\%$ | $\mathbf{4 5 - 6 4}$ <br> years $\%$ | $\mathbf{6 5 +}$ <br> years $\%$ |
| :--- | :---: | :---: | :---: | :---: |
| None | 33.1 | 37.0 | 40.1 | 55.9 |
| 1 day | 7.5 | 7.2 | 6.1 | 4.2 |
| 2 days | 12.3 | 11.8 | 11.8 | 8.8 |
| 3 days | 10.0 | 8.8 | 9.0 | 5.5 |
| 4 days | 6.9 | 5.2 | 4.5 | 4.5 |
| 5 days | 9.1 | 8.1 | 7.2 | 3.7 |
| 6 days | 3.7 | 3.6 | 3.4 | 2.4 |
| 7 days | 14.6 | 16.2 | 16.1 | 13.8 |
| DK | 2.9 | 1.9 | 1.9 | 1.2 |

Across age groups, the average time spent on moderate physical activity was reported to be 30 minutes or less by about $10 \%$ of respondents. An average time of 91 to 120 minutes was reported by about $12 \%$ of respondents being younger than 65 years of age, and $7.8 \%$ for those being 65 years of age and older.

Table 11. Time spend on moderate physical activity in the last 7 days by age

|  | $\mathbf{1 5 - 2 5}$ <br> years $\%$ | $\mathbf{2 6 - 4 4}$ <br> years $\%$ | $\mathbf{4 5 - 6 4}$ <br> years $\%$ | $\mathbf{6 5 +}$ <br> years\% |
| :--- | :---: | :---: | :---: | :---: |
| No moderate physical activities | 38.6 | 44.2 | 46.1 | 61.5 |
| 30 minutes or less | 13.0 | 10.2 | 10.0 | 7.6 |
| 31 to 60 minutes | 21.0 | 20.5 | 18.1 | 13.0 |
| 61 to 90 minutes | 4.2 | 4.0 | 4.4 | 4.0 |
| 91 to 120 minutes | 13.1 | 12.5 | 12.4 | 7.8 |
| More than 120 minutes | 3.5 | 3.3 | 4.0 | 2.6 |
| DK | 6.6 | 5.1 | 5.0 | 3.6 |

A rate of $12.1 \%$ of respondents of age 15-25 reported they did no walking for at least 10 minutes at a time during the past week. Of those being 26-44 years of age, $17.7 \%$ reported no walking, of those being $45-64$ years of age $17.5 \%$ reported no walking, and of those 65 years of age and older $20.3 \%$ reported no walking for at least 10 minutes at a time in the past 7 days.

Table 12. Days of walking for at least 10 minutes at a time in the last 7 days by age

|  | $\mathbf{1 5 - 2 5}$ <br> years $\%$ | $\mathbf{2 6 - 4 4}$ <br> years $\%$ | $\mathbf{4 5 - 6 4}$ <br> years $\%$ | $\mathbf{6 5 +}$ <br> years $\%$ |
| :--- | :---: | :---: | :---: | :---: |
| None | 12.1 | 17.7 | 17.5 | 20.3 |
| 1 day | 4.4 | 5.8 | 5.7 | 5.3 |
| 2 days | 7.6 | 9.2 | 9.7 | 8.9 |
| 3 days | 5.9 | 8.2 | 7.8 | 9.3 |
| 4 days | 6.5 | 5.4 | 6.4 | 6.2 |
| 5 days | 10.1 | 9.3 | 8.5 | 7.5 |
| 6 days | 6.1 | 4.8 | 4.5 | 4.4 |
| 7 days | 45.3 | 37.8 | 38.1 | 36.7 |
| DK | 2.0 | 1.8 | 1.7 | 1.6 |

The reported time spent walking on a usual day is less than 60 minutes for most respondents across all age groups.

Table 13. Time spend walking on a usual day by age

|  | $\mathbf{1 5 - 2 5}$ <br> years \% | $\mathbf{2 6 - 4 4}$ <br> years \% | $\mathbf{4 5 - 6 4}$ <br> years \% | $\mathbf{6 5 +}$ <br> years\% |
| :--- | :---: | :---: | :---: | :---: |
| No walking for at least 10 minutes | 16.7 | 21.4 | 21.6 | 23.5 |
| 30 minutes or less | 42.1 | 38.1 | 34.6 | 36.5 |
| 31 to 60 minutes | 21.2 | 20.7 | 22.7 | 22.9 |
| 61 to 90 minutes | 4.6 | 5.3 | 6.9 | 6.1 |

| From 6.31 hours to 7.30 hours | 11.6 | 8.2 | 7.5 | 7.5 |
| From 7.31 hours to 8.30 hours | 12.2 | 8.2 | 7.4 | 8.4 |
| More than 8.30 hours | 5.5 | 4.2 | 4.2 | 5.2 |
| DK | 5.5 | 6.3 | 6.2 | 6.6 |

### 1.3. Prevalence of Physical Activity by Gender

If the prevalence of vigorous physical activity was compared between women and men, about two thirds (65\%) of women and one half of men (49.1\%) did not report any vigorous physical activity in the past week.

Table 15. Days of vigorous physical activity in the last 7 days by gender

|  | Women $\%$ | Men $\%$ |
| :--- | :---: | :---: |
| None | 65.0 | 49.1 |
| 1 day | 7.3 | 8.5 |
| 2 days | 8.4 | 9.9 |
| 3 days | 6.3 | 8.2 |
| 4 days | 2.7 | 4.3 |
| 5 days | 3.2 | 8.0 |
| 6 days | 1.1 | 3.1 |
| 7 days | 4.9 | 7.4 |
| DK | 1.1 | 1.5 |

$4.3 \%$ of women reported vigorous physical activity bouts of 30 minutes or less, $12 \%$ reported those bouts to last 31 to 60 minutes, $4 \%$ reported those bouts to last 61 to 90 minutes, and $10.1 \%$ reported those bouts to last longer than 90 minutes. For men, $4.1 \%$ reported bouts of a length of 30 minutes or less, $17.6 \%$ reported bouts of 31 to 60 minutes, $5.2 \%$ reported bouts of 61 to 90 minutes, and $16.5 \%$ reported bouts longer than 90 minutes.

Table 16. Time spend on vigorous physical activity in the last 7 days by gender

|  | Women $\%$ | Men $\%$ |
| :--- | :---: | :---: |
| No vigorous physical activities | 67.4 | 53.6 |
| 30 minutes or less | 4.3 | 4.1 |
| 31 to 60 minutes | 12.0 | 17.6 |
| 61 to 90 minutes | 4.0 | 5.2 |
| 91 to 120 minutes | 7.5 | 12.1 |
| More than 120 minutes | 2.6 | 4.4 |
| DK | 2.2 | 3.0 |

A higher rate of women (43.2\%) than men (38.1\%) reported no physical activity of moderate level of intensity in the last 7 days. $16.8 \%$ of women reported moderate physical activity on every day, for men this rate was $14 \%$.

Table 17. Days of moderate physical activity in the last 7 days by gender

|  | Women $\%$ | Men $\%$ |
| :--- | :---: | :---: |
| None | 43.2 | 38.1 |
| 1 day | 5.6 | 7.1 |
| 2 days | 10.4 | 12.3 |
| 3 days | 8.1 | 8.8 |
| 4 days | 4.9 | 5.5 |
| 5 days | 6.0 | 8.5 |
| 6 days | 3.0 | 3.6 |
| 7 days | 16.8 | 14.0 |
| DK | 1.9 | 2.0 |

There is not much variation in the time spent on moderate physical activity bouts between females and males.

Table 18. Time spend on moderate physical activity on days with moderate physical activity by gender

|  | Women \% | Men \% |
| :--- | :---: | :---: |
| No moderate physical activities | 49.3 | 44.7 |
| 30 minutes or less | 10.9 | 9.3 |
| 31 to 60 minutes | 17.5 | 19.6 |
| 61 to 90 minutes | 3.7 | 4.7 |
| 91 to 120 minutes | 10.0 | 13.5 |
| More than 120 minutes | 3.4 | 3.4 |
| DK | 5.3 | 4.8 |

$16.1 \%$ of women reported they did not walk for at least 10 minutes at a time in the past week. For men, $18.3 \%$ reportes they did not walk for at least 10 minutes at a time in the past week. About $40 \%$ (38.4\% for women, $39.6 \%$ for men) reported daily walking for at least 10 minutes.

Table 19. Days of walking for at least 10 minutes at a time in the last 7 days by age

|  | Women $\%$ | Men $\%$ |
| :--- | :---: | :---: |
| None | 16.1 | 18.3 |
| 1 day | 4.9 | 5.9 |
| 2 days | 9.1 | 8.8 |
| 3 days | 8.8 | 6.9 |
| 4 days | 6.6 | 5.5 |
| 5 days | 8.9 | 8.8 |
| 6 days | 5.3 | 4.4 |
| 7 days | 38.4 | 39.6 |
| DK | 1.8 | 1.8 |

Walking bouts reported were 30 minutes or less most of the time. More than $20 \%$ of female ( $22.3 \%$ ) and male ( $21.3 \%$ ) respondents reported walking bouts lasting 31 to 60 minutes.

Table 20. Time spend walking on a usual day by gender

|  | Women \% | Men \% |
| :--- | :---: | :---: |
| No walking for at least 10 minutes | 19.4 | 22.7 |
| 30 minutes or less | 37.9 | 37.1 |
| 31 to 60 minutes | 22.3 | 21.3 |
| 61 to 90 minutes | 6.6 | 4.9 |
| 91 to 120 minutes | 6.2 | 6.1 |
| More than 120 minutes | 1.3 | 2.0 |
| DK | 6.3 | 5.9 |

The time spent sitting on a usual day does not vary between females and males.

Table 21. Time spend sitting on a usual day by gender

|  | Women $\%$ | Men $\%$ |

| Less than 1 hour | 2.1 | 1.8 |
| From 1 hour to 1.30 hours | 5.2 | 3.7 |
| From 1.31 hours to 2.30 hours | 11.3 | 9.2 |
| From 2.31 hours to 3.30 hours | 13.6 | 14.2 |
| From 3.31 hours to 4.30 hours | 14.5 | 14.5 |
| From 4.31 hours to 5.30 hours | 11.6 | 11.0 |
| From 4.31 hours to 5.30 hours | 11.0 | 10.0 |
| From 5.31 hours to 6.30 hours | 5.1 | 5.2 |
| From 6.31 hours to 7.30 hours | 7.5 | 9.4 |
| From 7.31 hours to 8.30 hours | 7.9 | 9.5 |
| More than 8.30 hours | 3.8 | 5.3 |
| DK | 6.2 | 6.1 |

### 1.4. Prevalence of Physical Activity in the Member States

Across Member States, the rate of those who reported no vigorous physical activity in the last 7 days ranged from a low of $43.3 \%$ in the Netherlands to a high of $71.7 \%$ in Spain. Lower than average rates of non-participation in vigorous physical activity in the past week were reported in Germany (45.2\%), Luxembourg (51.3\%), and Finland (51.4\%).

High rates of non-participation in vigorous physical activity could be found, beside Spain, in Italy (63.9\%), Ireland (62.3\%), and Belgium (61.4\%).

In the last 7 days, on how many days did you do vigorous physical activities like lifting heavy things, digging, aerobics or fast cycling?

Time usually spent doing vigorous physical activities is categorized in no vigorous physical activity, bouts of up to 60 minutes, and bouts that are longer than 60 minutes.

In Finland (27.7\%), the Netherlands (25.8\%), Luxemburg (23.8\%), and Sweden (23.5\%) more than $23 \%$ of the populations reported bouts of less than 60 minutes when they were engaged in vigorous physical activity.

## On the days when you do vigorous physical activities, how much time do you usually spend at it?

The lowest rates of non-participation in moderate physical activity in the last 7 days could be found in the Netherlands (7.5\%), Portugal (26.2\%), Germany (28.6\%), Denmark (30.6\%), Luxembourg (33.9\%), and Finland (35.9\%).

Highest rates of non-participation were reported in France (52.8\%), Spain (51.3\%), and Italy (50\%).

Moderate physical activity on 4 to 7 days per week was reported by $71.6 \%$ of adults in the Netherlands, compared to $31.1 \%$ in the EU average.

Time spent doing physical activity of moderate intensity is predominantly in bouts of up to 60 minutes.

On the days when you do moderate physical activities, how much time do you usually spend at it?

In the last 7 days, on how many days did you walk for at least 10 minutes at a time?

The rate of those who did not walk for at least 10 minutes at a time in the past week is $9.7 \%$ in Finland, $11.1 \%$ in Denmark, $12.7 \%$ in Germany, and $13 \%$ in Sweden. For the EU, the average is $17.1 \%$. A high rate of respondents did not walk for at least 10 minutes at a time in Belgium ( $26.7 \%$ ), the Netherlands ( $23.3 \%$ ), and France ( $22.1 \%$ ).

On days when you walk for at least 10 minutes at a time, how much time do you usually spend walking?

The time spent walking is in all countries predominantly in bouts of up to 60 minutes.

How much time do you spend sitting on usual day? This may include time spent at a desk, visiting friends, reading, studying or watching television.

In Denmark (14.4\%), the Netherlands (20.3\%), Sweden (21.7\%), and Finland (22.3\%) the rate of those who reported to sit for 3 hours or less on a usual day is, compared to the other countries, low.

Overall, significant variations across the physical activity parameters of the IPAQ can be observed in the Members States. Across parameters, respondents of the Netherlands, Denmark, Finland, Sweden, Germany, and Luxemburg reported higher prevalence of physical activity than the other nations.

Lower than average prevalences of physical activity were found in France, Belgium, Italy, Spain and Portugal.

## 2. Context of Physical Activity

### 2.1. General Situation in the European Union

To complement information of the "International Physical Activity Questionnaire" (IPAQ), respondents were asked in which context they were physically active in the past 7 days.

The 4 different contexts assessed were physical activity in the context of work, transportation, at home, and for recreation or leisure-time. Answer categories were a lot, some, and little or none.

Table 22. Context of physical activity (work)
Q.57.1: In the last 7 days, how much physical activity did you get at work?

|  | \% EU 15 |
| :--- | :---: |
| A lot | 19.9 |
| Some | 21.8 |
| Little or None | 49.4 |
| DK | 9.3 |

It can be noted, that about $20 \%$ (19.9\%) of respondents stated that they got a lot of physical activity at work in the last 7 days. About half of the respondents (49.4\%) reported no physical activity at work in the last 7 days.

## Table 23. Context of physical activity (transportation)

Q.57.2: In the last 7 days, how much physical activity did you get when moving from place to place?

|  | \% EU 15 |
| :--- | :---: |
| A lot | 15.7 |
| Some | 52.1 |
| Little or None | 30.5 |
| DK | 1.6 |

For physical activity in the context of transportation, $15.7 \%$ of the respondents stated that they got a lot of physical activity in this context. More than half ( $52.1 \%$ ) of the respondents reported some physical activity for transportation, and $30.5 \%$ reported little or none.

Table 24. Context of physical activity (home)
Q.57.3: In the last 7 days, how much physical activity did you get work in and around your house (including housework, gardening, general maintenance, or caring for family)?

|  | \% EU 15 |
| :--- | :---: |
| A lot | 24.6 |
| Some | 49.5 |
| Little or None | 24.6 |
| DK | 1.3 |

In the context of home, about $25 \%$ ( $24.6 \%$ ) of respondents reported a lot, or little or none ( $24.6 \%$ ) physical activity in the last 7 days. Half of the respondents (49.5\%) reported that they got some physical activity in the context of the own home.

Table 25. Context of physical activity (leisure)
Q.57.4: In the last 7 days, how much physical activity did you get for recreation, sport and leisure-time activities?

|  | \% EU 15 |
| :--- | :---: |
| A lot | 14.9 |
| Some | 36.6 |
| Little or None | 46.0 |
| DK | 2.6 |

A lot of recreational and leisure-time physical activity in the last 7 days is reported by $14.9 \%$ of respondents. $46 \%$ of the respondents stated that they got little or none leisure-time physical activity in the last 7 days.

### 2.2. Physical activity in different contexts by age

It can be noted, that physical activity in the different contexts varies significantly across age groups.

For physical activity in the context of work, $20.9 \%$ of respondents age $15-25,27.7 \%$ of age 26 44 , and $20 \%$ of age $45-64$ reported a lot of physical activity in the last 7 days. In the age group of those being 65 years of age and older, $2.7 \%$ of respondents reported a lot of physical activity at work.

Table 26. Physical activity in the contexts of work, transportation, at home and for leisure-time in the last 7 days by age

|  | $\mathbf{1 5 - 2 5}$ <br> years \% | $\mathbf{2 6 - 4 4}$ <br> years \% | $\mathbf{4 5 - 6 4}$ <br> years \% | $\mathbf{6 5 +}$ <br> years\% |
| :--- | :---: | :---: | :---: | :---: |
| Work |  |  |  |  |
| A lot | 20.9 | 27.7 | 20.0 | 2.7 |
| Some | 23.8 | 28.3 | 23.3 | 5.9 |
| Little or None | 46.9 | 39.3 | 48.0 | 72.1 |
| DK | 8.3 | 4.7 | 8.7 | 19.3 |
|  |  |  |  |  |
| Transportation |  |  |  |  |
| A lot | 21.4 | 16.4 | 14.5 | 11.1 |
| Some | 53.2 | 51.8 | 53.6 | 49.5 |
| Little or None | 24.2 | 30.7 | 30.5 | 36.1 |
| DK | 1.2 | 1.1 | 1.4 | 3.3 |
|  |  |  |  |  |
| Home | 15.5 | 27.7 | 27.9 | 24.0 |
| A lot | 46.2 | 49.0 | 51.3 | 50.6 |
| Some | 36.5 | 22.2 | 20.6 | 24.0 |
| Little or None | 1.9 | 1.0 | 1.1 | 1.3 |
| DK |  |  |  |  |
|  |  |  |  |  |
| Leisure-time | 31.0 | 14.5 | 11.2 | 6.1 |
| A lot | 39.2 | 39.7 | 36.0 | 29.5 |
| Some | 28.7 | 43.8 | 50.0 | 60.1 |
| Little or None | 1.1 | 2.1 | 2.8 | 4.3 |
| DK |  |  |  |  |

Similarly, those being 65 years of age and older reported lower rates of a lot of physical activity for the purpose of transportation compared to the younger age groups.

Physical activity at home is predominantly reported by the older age groups. Of those being 1524 years of age, $15.5 \%$ reported a lot of physical activity in the last 7 days, in the other 3 age groups this rate was $24 \%$ ( 65 years and older) to 27.9 \%(45-64 years of age).

Physical activity for recreational purposes declined with age. Of those being 15-24 years of age $70.2 \%$ reported at least some leisure-time physical activity in the last 7 days. In the age group of the 26-44 years old, $54.2 \%$ reported at least some leisure-time physical activity, while $47.2 \%$ of those $45-64$, and $35.5 \%$ of those 65 years of age and older reported some leisure-time physical activity in the last 7 days.

### 2.3. Physical activity in different contexts by gender

For physical activity at work, men reported to a higher rate a lot and some physical activity during the last 7 days than women. There is no variations in physical activity in the context of transportation between men and women.

About a third of women (32.1\%) reported a lot of physical activity in and around the home in the last 7 days. For men, $16.6 \%$ reported a lot of physical activity in and around the home in the last 7 days.

Men are, however, more likely to report a lot (18.1\%) or some (38.6\%) leisure-time physical activity than women.

Table 27. Physical activity in the contexts of work, transportation, at home and for leisure-time in the last 7 days by gender

|  | Women \% | Men \% |
| :--- | :---: | :---: |
| Work |  |  |
| A lot | 16.0 | 23.4 |
| Some | 20.0 | 23.8 |
| Little or None | 52.7 | 45.8 |
| DK | 11.4 | 7.0 |
|  | 15.8 |  |
| Transportation | 52.9 | 15.6 |
| A lot | 29.3 | 31.3 |
| Some | 2.0 | 1.8 |

| DK | 11.8 |  |
|  | 34.7 | 38.1 |
| Leisure-time | 20.8 | 40.9 |
| A lot |  | 2.4 |
| Some |  |  |
| Little or None |  |  |
| DK |  |  |

### 2.4. Context of physical activity in the Member States

Participation rates in physical activity in the last 7 days varied across the Member States.

A lot of physical activity in the context of work was reported by respondents in Austria (30.2\%), the Netherlands (28.7\%) and Germany (24.7\%).

In the last 7 days, how much physical activity did you get at work?

The lowest rates of participation in a lot of physical activity at work were reported in Finland (10.6\%), Sweden (12.4\%) and Italy (12.9\%).

For the context of transportation, a lot of physical activity was reported by respondents in Great Britain (26.3\%), Portugal (21.6\%), Ireland (20.7\%), the Netherlands (20\%) and Germany (19.3\%).

Lower rates of such physical activity were reported in Finland (4.9\%), Belgium (6\%), and France (6.9\%), where only about $6 \%$ of respondents reported a lot of physical activity for the means of transportation.

In the last 7 days, how much physical activity did you get when moving from place to place?

About one third of respondents in Germany (37.9\%), Great Britain (35.2\%), and the Netherlands (33.4\%) reported a lot of physical activity in and around of home. In Finland (8.5\%), France (10.3\%), and Belgium (15.2\%) only about $10 \%$ of respondents reported a lot of physical activity in the context of home.
A high prevalence of a lot of leisure-time physical activity was found in the Netherlands (24.2\%), Sweden (22.6\%), Luxembourg (22.2\%), Ireland (19.8\%), and Austria (19.3\%).

At the low end, less than 10\% of respondents in the southern European countries Greece ( $8.7 \%$ ), Portugal ( $9.4 \%$ ), and Italy ( $9.8 \%$ ) reported a lot of physical activity for recreational purposes. For Finland it can be noted, that only $11.7 \%$ of adults reported a lot of leisure time physical activity in the last 7 days, that however, compared to the other countries, a high rate of respondents reported moderate levels of recreational physical activity (46.7\%)

> In the last 7 days, how much physical activity did you get work in and around your house (including housework, gardening, general maintenance, or caring for family)?

In the last 7 days, how much physical activity did you get for recreation, sport and leisure-time activities?

## 3. Perception of Environmental Opportunities for Physical Activity <br> 3.1. General Situation in the European Union

In order to assess the perception of adults of environmental opportunities for physical activity, three items were used.

The first item asked whether respondents agreed or disagreed with the statement "The area where I live offers me many opportunities to be physically active".

The second item asked whether respondents agreed or disagreed with the statement "Local sport clubs and other local providers offer many opportunities to be physically active".

The third item asked whether respondents agreed or disagreed with the statement "My local authority does enough for its citizens concerning their physical activities".

Table 28. Perception of opportunities to be physically active in local area
Q.58.a: To what extent do you agree or disagree with the following statement concerning sport and physical activity?
"The area where I live offers me many opportunities to be physically active."

|  | \% EU 15 |
| :--- | :---: |
| Strongly agree | 28.3 |
| Tend to agree | 41.7 |
| Tend to disagree | 14.2 |
| Strongly disagree | 9.2 |
| DK | 6.7 |

It can be noted that more than two thirds (70.0\%) of the population strongly agreed or agreed that the area where they live offers many opportunities to be physically active.

Similarly, more than two thirds of respondents (69.2\%) strongly agreed or agreed that local sport clubs or other providers offer many opportunities to be physically active.

The percentage of those that strongly agreed or agreed that their local authority does enough for its citizens concerning physical activity was slightly lower (55.7\%).

Table 29. Perception of local sport clubs and other local providers offering many opportunities to be physically active
Q.58.b: To what extent do you agree or disagree with the following statement concerning sport and physical activity?
"Local sport clubs and other local providers offer many opportunities to be physically active."

|  | \% EU 15 |
| :--- | :---: |
| Strongly agree | 27.5 |
| Tend to agree | 41.7 |
| Tend to disagree | 12.7 |
| Strongly disagree | 9.0 |
| DK | 9.1 |

Table 30. Perception of local authority doing enough for citizens physical activity
Q.58.c: To what extent do you agree or disagree with the following statement concerning sport and physical activity?
"My local authority does enough for its citizens concerning their physical activities."

|  | \% EU 15 |
| :--- | :---: |
| Strongly agree | 18.1 |
| Tend to agree | 37.6 |
| Tend to disagree | 19.0 |
| Strongly disagree | 13.0 |
| DK | 12.3 |

### 3.2. Perception of Environmental Opportunities for Physical Activity by age

Between the age groups of the 15-25 years old, the 26-44 years old, and the 45-65 years old only minor variations in regard to the perception of environmental opportunities for physical activity could be observed.

Compared to these 3 age groups, however, those being 65 years of age and older had more critical perceptions of environmental opportunities for physical activity. Only about $20 \%$ of adults 65 years of age and older strongly agreed to the statements concerning environmental opportunities for physical activity, in the other age groups, this rate was about $30 \%$.

Table 31. Perception of environmental opportunities for physical activity by age

|  | $\mathbf{1 5 - 2 5}$ <br> years \% | $\mathbf{2 6 - 4 4}$ <br> years \% | $\mathbf{4 5 - 6 4}$ <br> years \% | $\mathbf{6 5 ~ +}$ <br> years\% |
| :--- | :---: | :---: | :---: | :---: |
| "The area where I live offers me <br> many opportunities to be physically <br> active" |  |  |  |  |
| Strongly agree | 31.0 | 29.0 | 29.2 | 22.9 |
| Tend to agree | 40.4 | 42.8 | 43.3 | 38.3 |
| Tend to disagree | 16.1 | 15.3 | 13.1 | 12.3 |
| Strongly disagree | 10.0 | 9.3 | 8.0 | 9.8 |
| DK | 2.5 | 3.6 | 6.3 | 16.7 |
|  |  |  |  |  |
| "Local sport clubs and other local <br> providers offer many opportunities <br> to be physically active" |  |  |  |  |
| Strongly agree | 30.1 | 28.8 | 28.6 | 21.0 |
| Tend to agree | 43.0 | 42.8 | 42.3 | 37.4 |
| Tend to disagree | 13.4 | 13.6 | 12.5 | 10.6 |
| Strongly disagree | 9.5 | 9.1 | 7.8 | 10.2 |
| DK | 3.9 | 5.6 | 8.8 | 20.9 |
|  |  |  |  |  |
| "My local authority does enough |  |  |  |  |
| for its citizens concerning their <br> physical activities" | 18.6 | 17.4 | 19.3 | 17.2 |
| Strongly agree | 36.6 | 38.5 | 39.2 | 34.5 |
| Tend to agree | 21.6 | 20.8 | 18.1 | 14.8 |
| Tend to disagree | 14.4 | 13.8 | 12.1 | 11.3 |
| Strongly disagree | 8.6 | 9.7 | 11.3 | 22.2 |
| DK |  |  |  |  |

### 3.3. Perception of Environmental Opportunities for Physical Activity by Gender

Perception of environmental opportunities for physical activity did not vary significantly between men and women.
$68.1 \%$ of women strongly agreed or agreed that the area where they live offers them many opportunities to be physically active. For men, $71.9 \%$ strongl agreed or agreed to this statement.

For the Items "Local sport clubs and other local providers offer many opportunities to be physically active", and "My local authority does enough for its citizens concerning their physical activities", the variations between women and men are negligible.

Table 32. Perception of environmental opportunities for physical activity by gender

|  | $\mathbf{1 5 - 2 5}$ <br> years $\%$ | $\mathbf{6 5 +}$ <br> years\% |
| :--- | :---: | :---: |
| "The area where I live offers me many <br> opportunities to be physically active" |  |  |
| Strongly agree | 26.7 | 30.0 |
| Tend to agree | 41.4 | 41.9 |
| Tend to disagree | 9.8 | 14.2 |
| Strongly disagree | 7.8 | 8.4 |
| DK |  | 5.5 |
|  | 26.9 | 28.2 |
| "Local sport clubs and other local <br> providers offer many opportunities to be <br> physically active" | 41.1 | 42.3 |
| Strongly agree | 12.3 | 13.1 |
| Tend to agree | 9.6 | 8.3 |
| Tend to disagree | 10.1 | 8.1 |
| Strongly disagree |  |  |
| DK |  |  |
|  | 17.9 | 18.4 |
| "My local authority does enough for its <br> citizens concerning their physical <br> activities" | 37.5 | 37.7 |
| Strongly agree | 18.5 | 19.5 |
| Tend to agree | 12.9 | 13.1 |
| Tend to disagree | 13.3 | 11.3 |
| Strongly disagree |  |  |

### 3.4. Perception of Environmental Opportunities in the Member States

Attitudes towards opportunities for physical activity in the area where one lives were not homogeneous across the Member States. More than 80\% of adults in Denmark (87\%) and Austria ( $80.3 \%$ ) agreed that the area where they live offers many opportunities to be physically active.

In the southern countries Portugal (48.6\%), Italy (54.2\%), Greece (63.7\%), and Spain (68.3\%) attitudes toward such opportunities were the least favorable. Also, in Great Britain (67\%) attitudes toward such opportunities were less favorable then the average for the European Union.

## The area where I live offers me many opportunities to be physically active

$\square$ strongly agree - agree $\square$ disagree - strongly disagree

The statement that local sport clubs and other providers offer many opportunities for physical activity is agreed upon by almost $90 \%$ of adults in the Netherland (88.7\%), and Denmark ( $86.7 \%$ ). Finland ( $78.6 \%$ ), Germany ( $74.8 \%$ ), and Sweden ( $73.9 \%$ ) did also show a higher than average approval to this statement.

## Local sport clubs and other local providers offer many opportunities to be physically active

The southern countries Portugal (44.9\%), Italy (54.1\%), and Greece (62.7) had the lowest rate of approval to this statement in comparison to the other Member States.

In comparison to the first two items, the statement "My local authority does enough for its citizens concerning their physical activities" yields lower rates of agreement across Member States.

In the Netherlands (71.4\%), Denmark (69\%), and Sweden (68.7\%) agreement to this statement was comparably high.

Italy (39.4\%), Portugal (39.9\%), and Ireland (41.6\%) featured the lowest rate of agreement to this statement. For Italy, and Portugal, the rates of adults that disagree to the statement that local authorities do enough for citizens concerning physical activity was higher than the rate of adults who agreed to the statement.

In France (67.5\%), Finland (66.9\%), Luxemburg (65.4\%), Belgium (64.7\%), Austria (61.7\%), Germany (59.8\%), Spain (54.3\%), Greece (50.3\%), and Great Britain (48.8\%) agreement to the statement was average.

Across the three items that assessed the perception of environmental opportunities for physical activity, adults in southern countries, Great Britain, and Ireland rated such opportunities more critical compared to the other Member States.

The most favorable ratings of environmental opportunities for physical activity occurred in the Netherlands, Denmark, Finland, Sweden, and Germany.

My local authority does enough for its citizens concerning their physical activities

## 4. Methodological considerations

### 4.1. International Physical Activity Questionnaire (IPAQ)

The "International Physical Activity Questionnaire" was used to estimate the prevalence of physical activity in the Member States (Q.50-Q.56). The intend of the IPAQ is to provide an instrument that can be used to monitor levels of physical activity globally. During the creation of the IPAQ, special emphasis was placed on developing an instrument that has a high level of cultural equivalence, and that can be used for the cross-national comparison of physical activity levels.

Cultural equivalence was definded as:

Conceptual equivalence: Respondents have to attach the same meaning to the terms and concepts used in the IPAQ.

Metric equivalence: The numbers reported should mean the same thing to respondents (e.g. intensity levels of used examples are consistent across nations).

Linguistic equivalence: Terminology and grammar used in the IPAQ have to have the same meaning across nations.

For use in the EUROBAROMETER, the existing English version of the IPAQ was translated into all languages of the Member States paying close attention to these problems of cultural equivalence.

In the first step of the translation prozess, the English master version of the IPAQ short form was provided to INRA, and INRA created national versions for all Member States with the help of their national partners. Secondly, these national versions were sent to physical activity experts in all Member States. Physical activity experts had to compare their national version to the English master version in regard to cultural equivalence. Physical activity experts were encouraged to make necessary recommendations in order to increase the cultural equivalence of their national version. Thirdly, the recommendations of the physical activity experts were considered by INRA in the process of finalizing the national versions of the IPAQ that were used in the EUROBAROMETER.

The IPAQ was tested for reliability and validity by the IPAQ committee in 12 countries in the years 1998-1999.

Test-retest reliability was determined to be around 0.8 for Spearman's Rho when the retest was performed after 3 to 7 days.

Criterion validity was determined to be around 0.3 (Rho) when tested against accelerometer (computer science application) data from 7 consecutive days.

The test-retest reliabilty of the IPAQ was also examined in the European Physical Activity Surveillance System (EUPASS) project. Measures of Spearman's Rho indicated a test-retest reliability for the "last 7 days" short version of the IPAQ of around 0.4.

To explore homogeneity of the IPAQ in measuring physical activity in the Member States, relationships between reported days of vigorous physical activity in the last 7 days (Q.50) were examined across age groups.

Results indicate that, in all countries except Greece, respondents age 45 and older reported less vigorous physical activity in the last 7 days than those of younger age. The reason for Greece showing a different pattern is not known.

## Mean number of days reported in the last 7 days with vigorous physical activities by agegroups

### 4.2. Context of Physical Activity

The context of physical activity in the last 7 days was assessed by question Q.57. Test-retest reliability of these items was assessed in the European Physical Activity Surveillance (EUPASS) project.

For physical activity in the context of work, Spearmans Roh was 0.54 , in the context of transportation it was 0.41 , at home it was 0.43 , and for leisure it was 0.42 when retested after 7 to 10 days.

### 4.3. Perception of Environmental Opportunities for Physical Activity

Questions 58 were used to assess the perception of environmental opportunities for physical activity in the Member States. The 3 items were tested for reliability in the European Physical Activity Surveillance (EUPASS) project.

Test-retest reliability for Spearmans Roh were 0.66 for item Q.58.a, 0.64 for item Q.58.b, and 0.71 for item Q.58.c when retested after 7 to 10 days.

## APPENDIX

## Technical Specifications

## 1. COUNTRIES, NATIONAL INSTITUTES, FIELDWORK PERIOD, NET SAMPLE SIZE AND EXTRAPOLATION FIGURES

Between $28^{\text {th }}$ October 2002 and $8^{\text {th }}$ December 2002, the European Opinion Research Group, a consortium of Market and Public Opinion Research agencies, made out of INRA in Belgium - I.C.O. and GfK Worldwide, carried out wave 58.2 of the standard Eurobarometer, on request of the EUROPEAN COMMISSION, Directorate-General Press and Communication, Opinion Polls.

The Standard EUROBAROMETER 58.2 covers the population of the respective nationalities of the European Union Member States, aged 15 years and over, resident in each of the Member States. The basic sample design applied in all Member States is a multistage, random (probability) one. In each EU country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

For doing so, the points were drawn systematically from each of the "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the Member States according to the EUROSTAT NUTS 2 (or equivalent) and according to the distribution of the resident population of the respective EU-nationalities in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address was drawn, at random. Further addresses were selected as every $\mathrm{N}^{\text {th }}$ address by standard random route procedures, from the initial address. In each household, the respondent was drawn, at random. All interviews were face-to-face in people's home and in the appropriate national language.

|  | TOTAL NUMBER OF INTERVIEWS | 16,230 |  |  |

For each country a comparison between the sample and the universe was carried out. The Universe description was derived from Eurostat population data or from national statistics. For all EU member-countries a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. As such in all countries, minimum gender, age, region NUTS 2 were introduced in the iteration procedure. For international weighting (i.e. EU averages), INRA (EUROPE) applies the official population figures as provided by EUROSTAT in the Regional Statistics Yearbook (data for 1997). The total population figures for input in this post-weighting procedure are listed above.

The results of the Eurobarometer studies are reported in the form of tables, datafiles and analyses. Per question a table of results is given with the full question text in English, French and German. The results are expressed as a percentage of the total. The results of the Eurobarometer surveys are analysed and made available through the Directorate-General Press and Communication, Opinion Polls of the European Commission, rue de la Loi 200, B-1049 Brussels. The results are published on the Internet server of the European Commission: http://europa.eu.int/comm/dg10/epo. All Eurobarometer datafiles are stored at the Zentral Archiv (Universität Köln, Bachemer Strasse, 40, D-50869 Köln-Lindenthal), available through the CESSDA Database http://www.nsd.uib.no/cessda/europe.html. They are at the disposal of all institutes members of the European Consortium for Political Research (Essex), of the Inter-University Consortium for Political and Social Research (Michigan) and of all those interested in social science research.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1,000 interviews, the real percentages vary within the following confidence limits:

| Observed percentages | $10 \%$ or $90 \%$ | $20 \%$ or $80 \%$ | $30 \%$ or $70 \%$ | $40 \%$ or $60 \%$ | $50 \%$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Confidence limits | $\pm 1.9 \%$ | $\pm 2.5 \%$ | $\pm 2.7 \%$ | $\pm 3.0 \%$ | $\pm 3.1 \%$ |

## 3. COMPARISON BETWEEN SAMPLE AND UNIVERSE, AND WEIGHTING

For each Standard Eurobarometer survey, a comparison between sample and universe is carried out, per country. The universe description is derived from EUROSTAT population data.

There are 17 sample areas: one for each country of the European Union, in addition Germany is divided into East and West, and United Kingdom into Great Britain and Northern Ireland.

Each sample area contains a number of interviews, this number may be somewhat above or below that aimed at. The target is 1,000 per sample area, except for Northern Ireland, 300, and Luxembourg, 600.

WEIGHTS DELIVERED WITH THE EUROBAROMETER DATA SET:
There are 15 different weights used in the Eurobarometer survey.
W. 1 WEIGHT RESULT FROM TARGET (also WEIGHTP or WSAMPLE)
W. 2 DROPPED
W. 3 WEIGHT SPECIAL GERMANY (also WEIGHTGER)
W. 4 WEIGHT SPECIAL UNITED KINGDOM (also WEIGHT1)
W. 5 WEIGHT EURO 6 (also WEIGHT6)
W. 6 WEIGHT EURO 9 (also WEIGHT9)
W. 7 WEIGHT EURO 10 (also WEIGHT2)
W. 8 WEIGHT EURO 12 - Former EAST GERMANY (also WEIGHT3M)
W. 9 WEIGHT EUROPE 12 (also WEIGHT3P)
W. 10 WEIGHT EURO +3 (also WEIGHTNEW)
W. 11 WEIGHT EUROPE 15 (also WEIGHT15 or WEURO)
W. 12 WEIGHT NORWAY (also WEIGHTNOR)
W. 13 WEIGHT TOTAL (also WEIGHT15P or WCPLUS)
W. 14 WEIGHT STANDARD SIZE - GERMANY AND UNITED KINGDOM EXTRAPOLATED (also WEIGHTC or WNATION)
W. 15 WEIGHT EURO 11 (without Greece)
W. 16 WEIGHT EURO 12 (with Greece)

For each EU member state, a national weighting procedure, using marginal (RIM) and intercellular weighting (Iterative Proportional Fitting - IPF), is carried out, based on this universe description. As such, in all countries, minimum gender, age, region NUTS 2 are introduced in the iteration procedure (W.1).

An additional factor (extrapolation) is added, to bring former East and West Germany together in one entity (W.3). Former East Germany counts for $20.8 \%$ and former West Germany counts for 79.2\%.

The same principle is used to bring Northern Ireland together with Great Britain, to form the United Kingdom (W.4). Here Northern Ireland counts for $2.5 \%$ and Great Britain, for 97.5\%.

For the sake of analysis, historical weights were created, bringing countries together, contained in historical entities such as Europe of the 6, 9, 10, and 12. (W. 5 from to W.10). Countries not inserted in these weights are set to 0 .

In order to make a European 15 weight, the data are extrapolated using population figures for each sample area ( 15 members $=17$ sample areas) (W.11).

Standard Eurobarometer surveys may include data from Norway. A special weight is created only for Norway (W.12).

For international weighting, INRA applies the official population figures as provided by EUROSTAT in the Regional Statistical Yearbook (data for 1997). Total population figures for input in this post-weighting procedure are listed above. The result is WEIGHT TOTAL (W.13)
W. 14 extrapolates the new and old Länder to their respective proportion in the whole of Germany, (former East Germany (20.8\%), former West Germany (79.2\%) and does the same for Great Britain (97.5\%) and Northern Ireland (2.5\%). The other countries are left untouched.

From Eurobarometer 49 onwards, a new weight (W.15) was created to separate the 11 countries that accepted to introduce the euro, as of 01/01/1999.

From Eurobarometer 54 onwards, a new weight (W.16) was created to add Greece into the group of countries that accepted to introduce the euro. For an analysis of these 12 countries, use W. 16 .

## PRECISION OF WEIGHTS:

Each weight is expressed in 10,000 . This means that a person with weight equal to 1 will have the weight 10,000 , a person with weight equal to 1.534 will have the weight 15,340 . In other words, we use 4 decimal point digits. Hence, you need to divide by 10,000 to have the number of people interviewed contained in the data set.

## Questions on Physical Activity: ENGLISH VERSION

The next questions are about the time you have spent being physically active in the last 7 days.
They include questions about activities you do at work, to get from place to place, as part of your work around the house, and in your spare time for recreation, exercise or sport.
In answering the following questions,
Vigorous physical activities refer to activities that take hard physical effort and make you breathe much harder than normal.
Moderate activities refer to activities that take moderate physical effort and make you breathe somewhat harder than normal.

In answering the questions, think about only those physical activities that last at least 10 minutes.
Q. 50. In the last 7 days, on how many days did you do vigorous physical activities like lifting heavy things, digging, aerobics or fast cycling?

days (285-286)
