

Roma | XVII Incontro della Rete Baby Friendly | 09.10.2024

Genitori, luogo dello sviluppo

L'importanza del lavoro precoce e collaborativo con le famiglie

Livio Provenzi

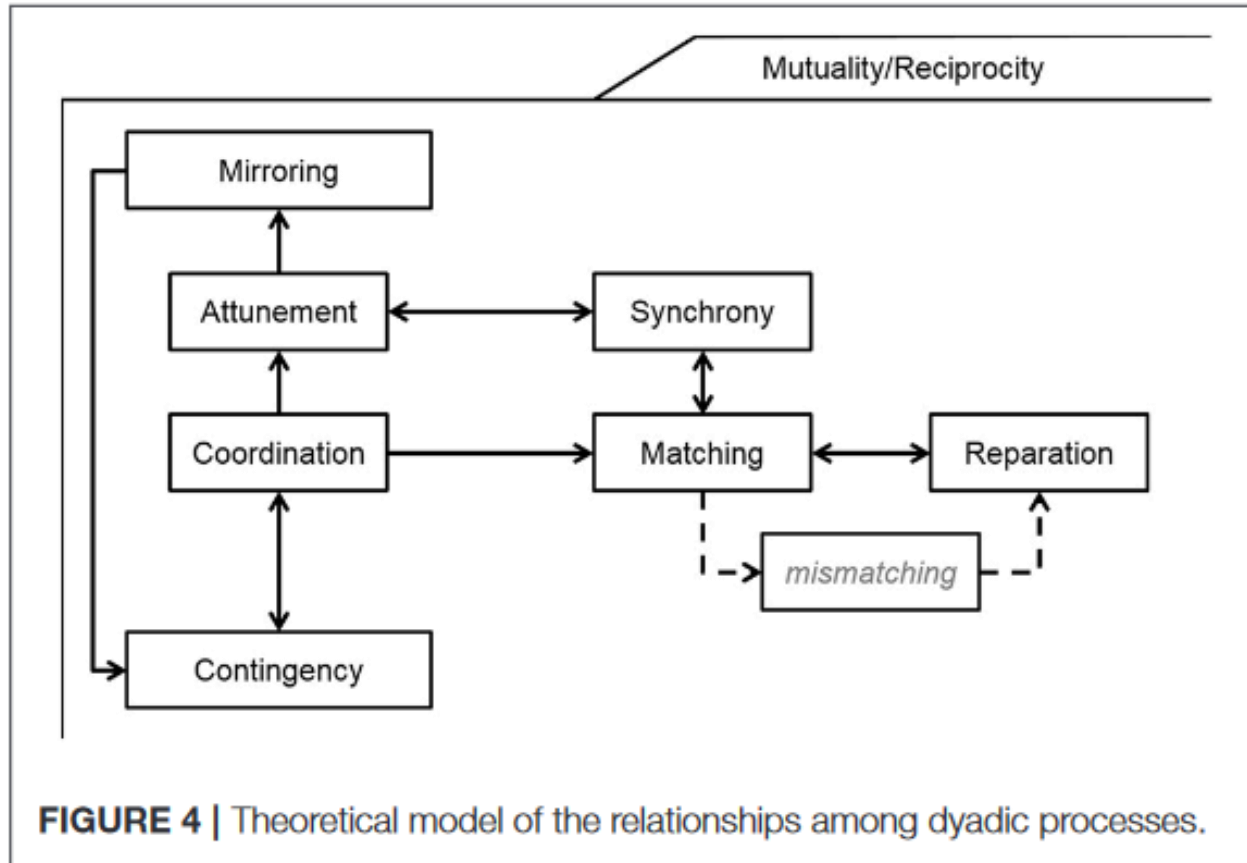

Department of Brain and Behavioral Sciences, University of Pavia
Developmental Psychobiology Lab (dps lab) | IRCCS Mondino Foundation

tutta l'attività disordinata
continua, terribile, ma allegra

Elizabeth Bishop | L'ansa

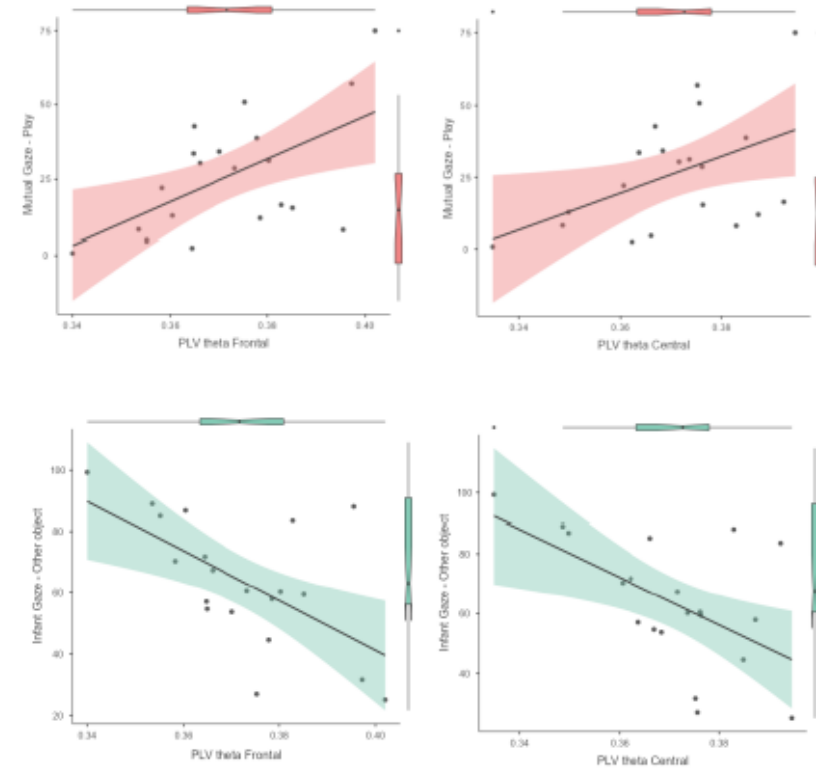

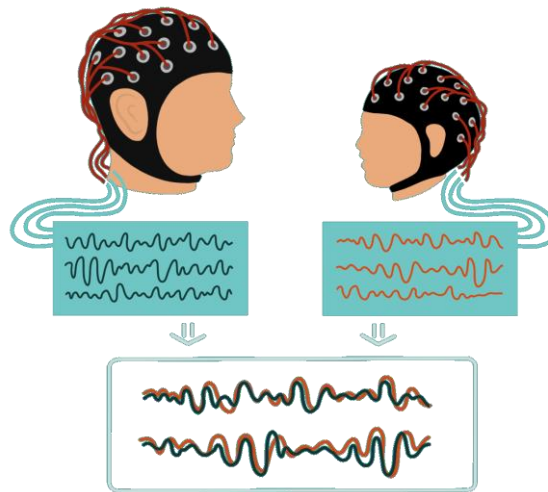

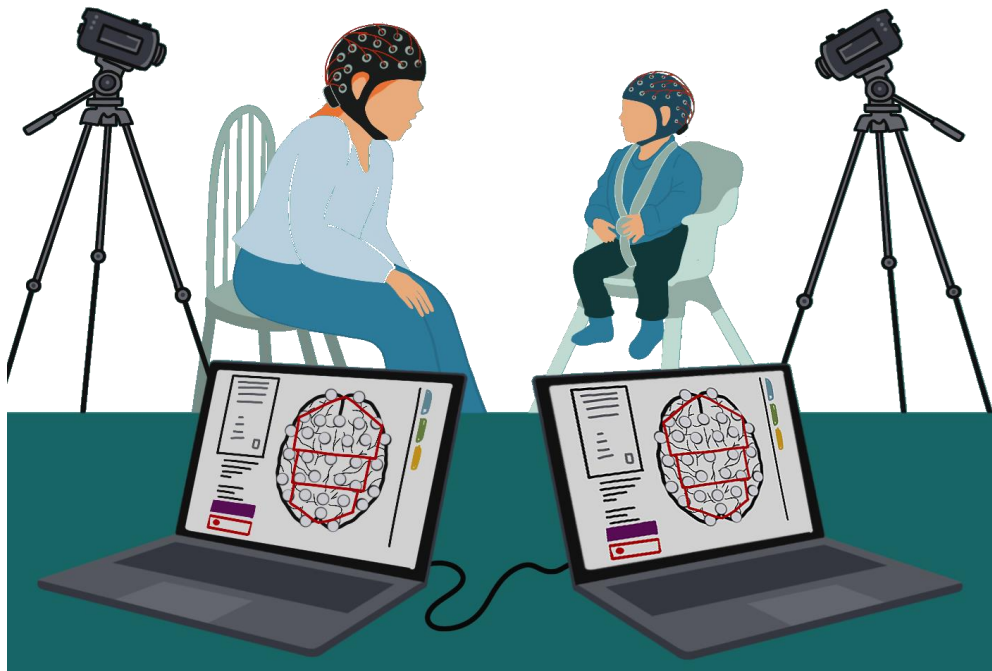

connessioni e significati

**l'arte di perdere
non è difficile da imparare,
benché possa sembrare un vero
(scrivilo!) disastro**

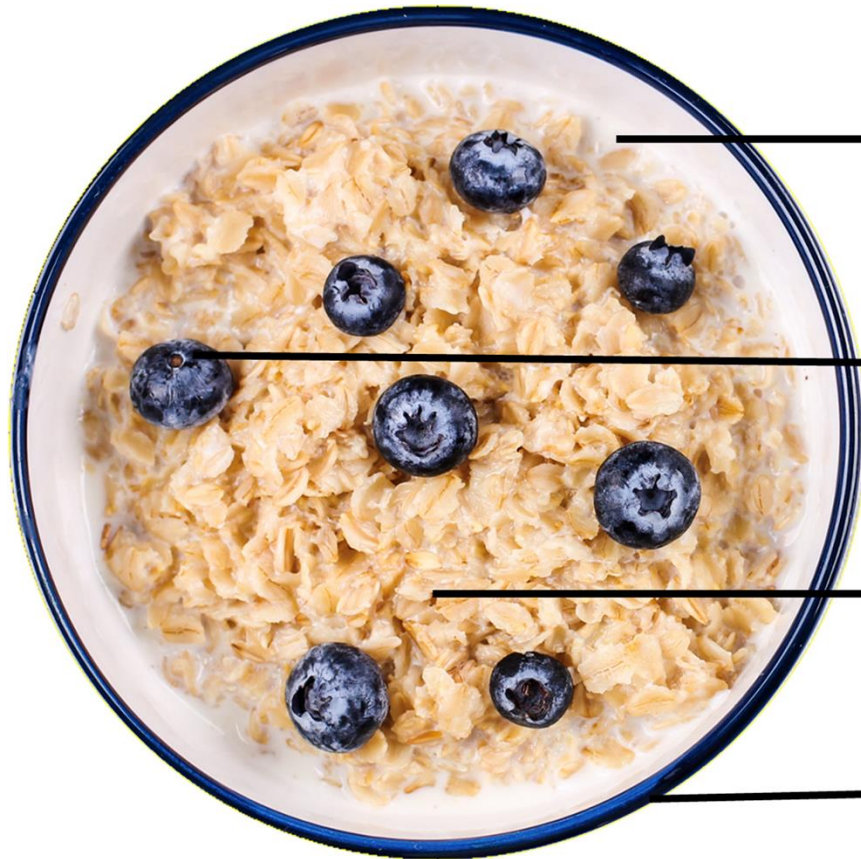

Elizabeth Bishop | One art

**SAPERE
SCIENTIFICO**

ATTO DI CURA

**FARE
ARTIGIANALE**

cosa fanno i genitori?

A – Affect and emotions [milk]

This is the more liquid and transient component of parenting, which may rapidly change or crystalize in stable conditions of depression or anxiety

B – Behavior and interactive skills [fruit]

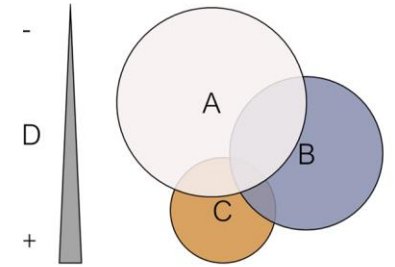

This is the more solid component of parenting, which emerges and can be observed and measured with quantitative tools that target sensitivity, responsivity, intrusiveness, etc.

C – Cognitions and representations [flakes]

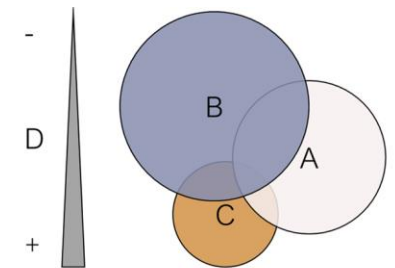

This is the mild component of parenting, made up of explicit and implicit cognitive representations of themselves as parents, of the child, and the interaction.

D – Degree of child impairment [cup size]

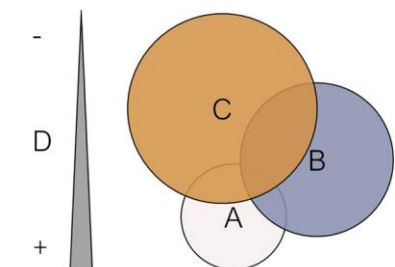

This is the contextual element that is constrained by the child clinical conditions and how much it impacts the opportunities for reciprocally satisfactory interactions.

Prefer interventions that promote emotional well-being, stress mitigation, coping and affective adjustment

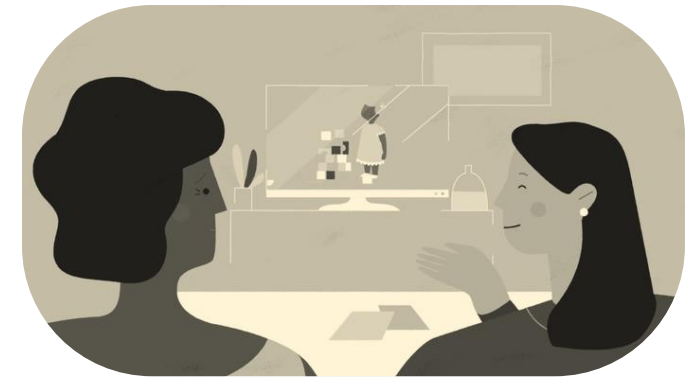

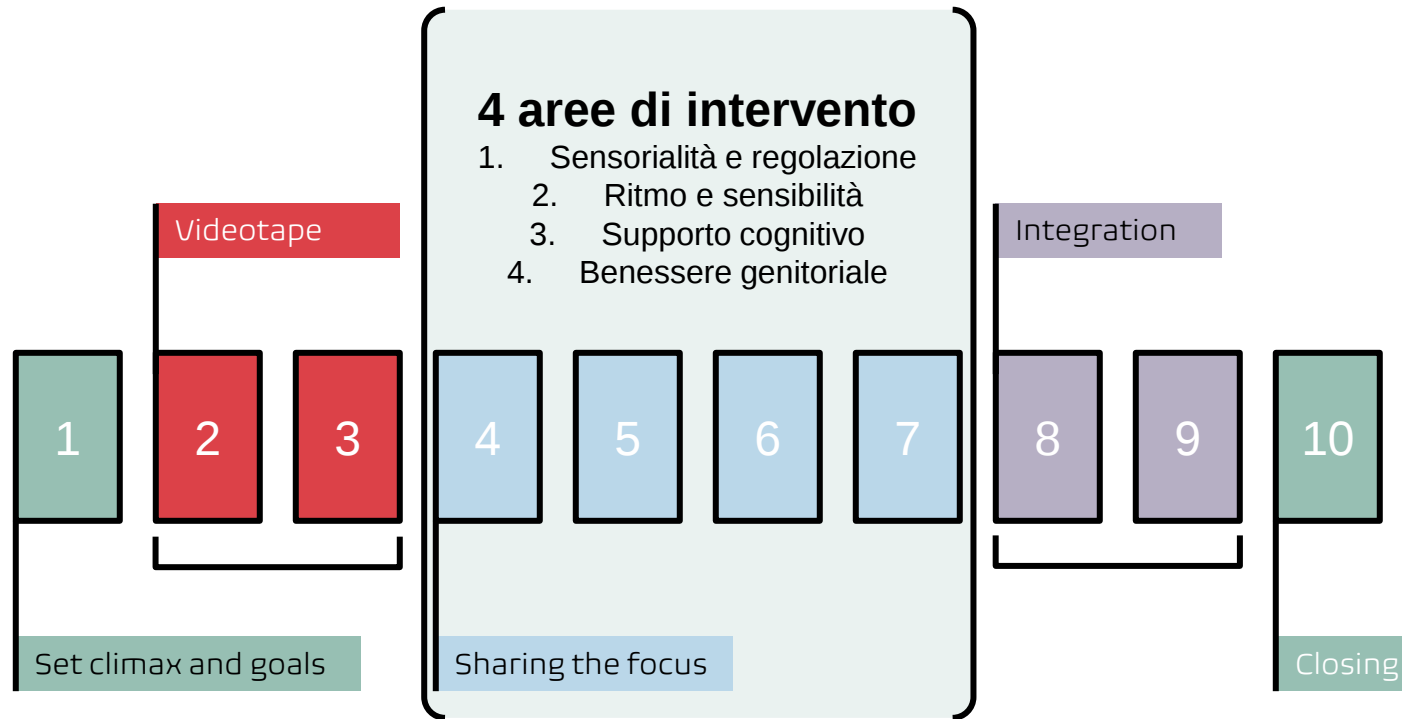

Prefer interventions that promote sensitive parenting, self-confidence in the parental role and caregiving skills

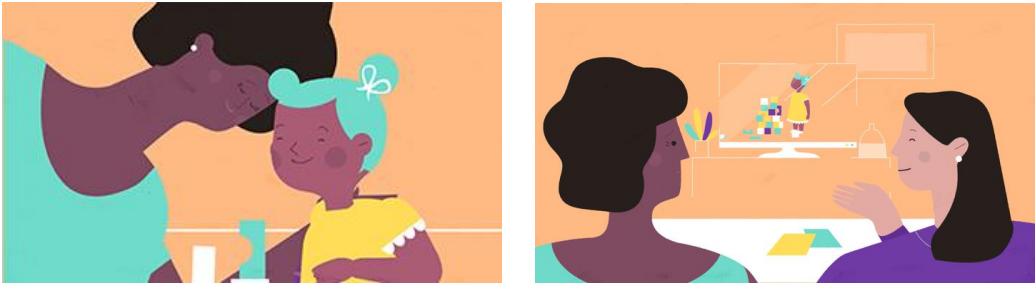

Prefer interventions that promote better integration in parents' mental representations of themselves and their children

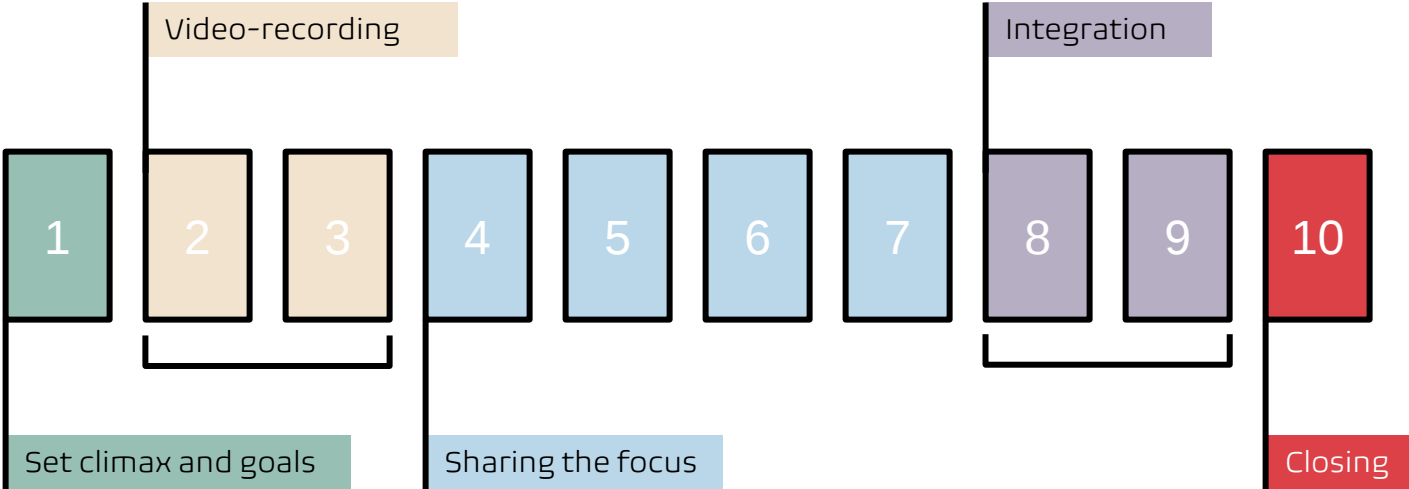

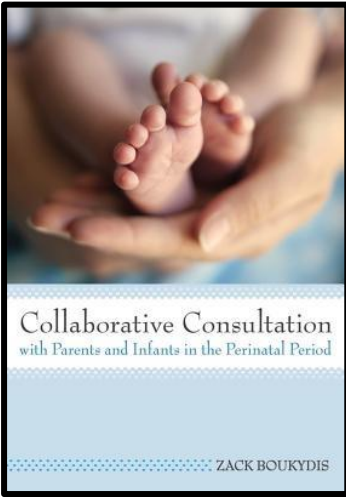

collaborative care

L'utilizzo del **video-feedback** non è in funzione ortopedica, ma è una scusa per promuovere la curiosità genitoriale, con lo scopo ultimo di promuovere cicli di riparazione, di costruzione di significati, di resilienza.

Early intervention using the video-feedback methodology

Phases	Sessions
<i>Sharing the focus</i>	Sensitivity-Responsiveness
	Stimulation
	Encouragement
	Parental Perspective
<i>Interactive integration</i>	Real-time mother-infant interaction
