

225,549 cases of COVID-19*

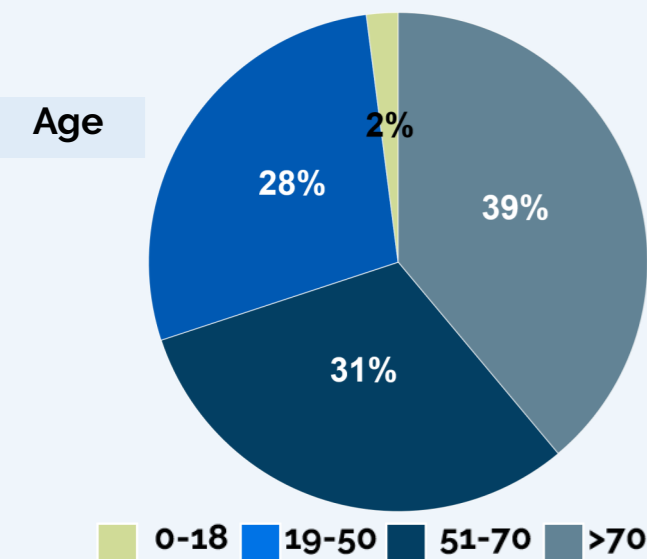

26,426 health-care workers[§]

30,332 associated deaths

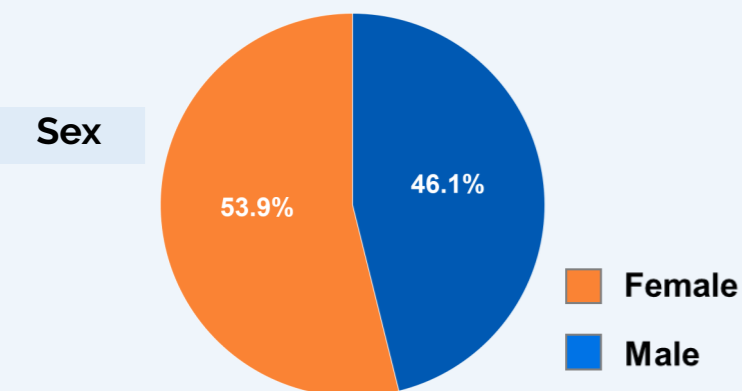

Integrated surveillance of COVID-19 in Italy

(Ordinanza n. 640 del 27/02/2020)

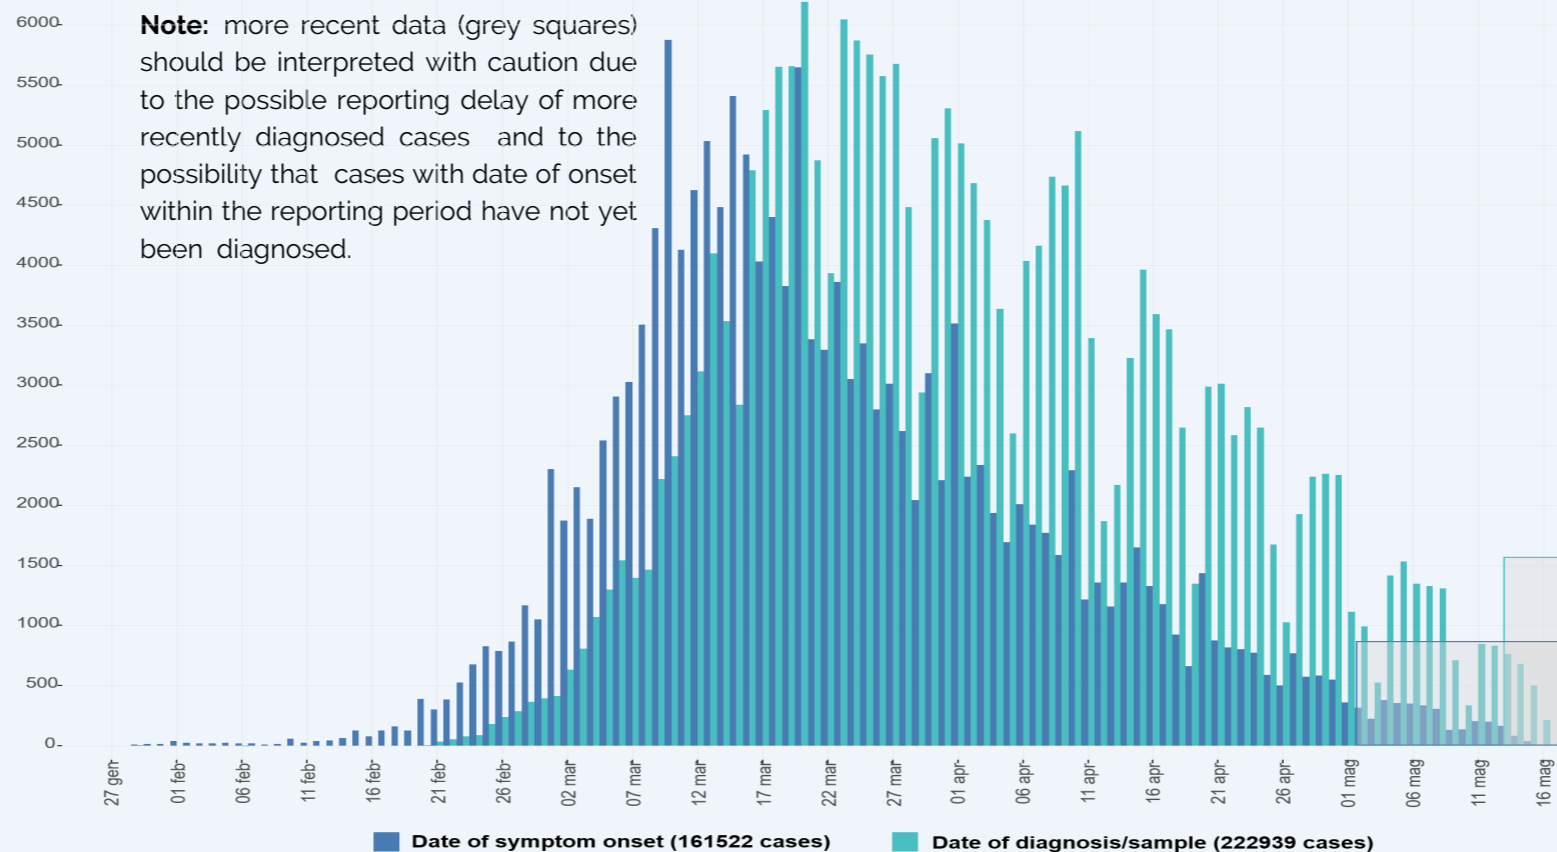

18 May 2020 UPDATE

Median age of cases; **62 years**

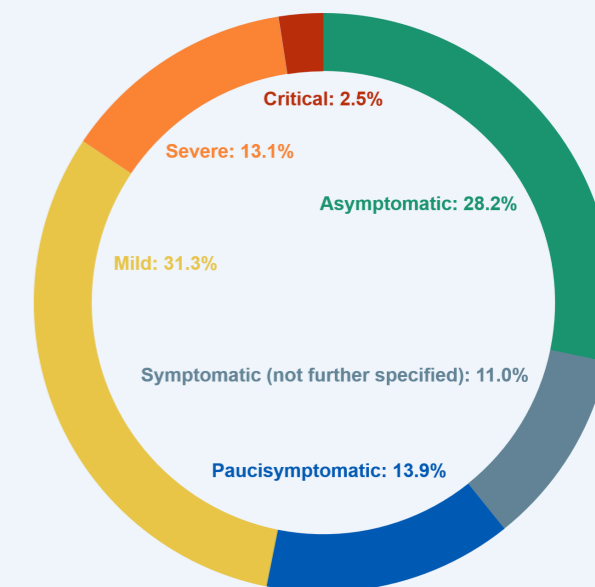

Age (years)	Deaths [n (%)]	CFR [§]
0-9	4 (0%)	0.2%
10-19	0 (0%)	0%
20-29	12 (0%)	0.1%
30-39	60 (0.2%)	0.3%
40-49	262 (0.9%)	0.9%
50-59	1081 (3.6%)	2.7%
60-69	3174 (10.5%)	10.5%
70-79	8337 (27.5%)	25.5%
80-89	12387 (40.8%)	31.1%
>=90	5015 (16.5%)	27.6%
Not reported	0 (0%)	0%
Total	30332 (100%)	13.4%

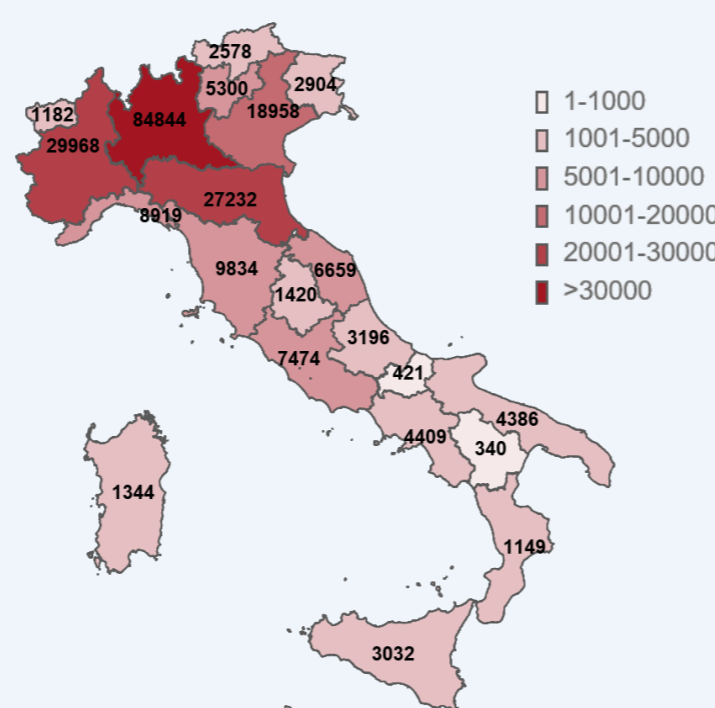

Note: more recent data (grey squares) should be interpreted with caution due to the possible reporting delay of more recently diagnosed cases and to the possibility that cases with date of onset within the reporting period have not yet been diagnosed.

99% of the clinical samples processed were confirmed by the National Reference Laboratory at the Istituto Superiore di Sanità

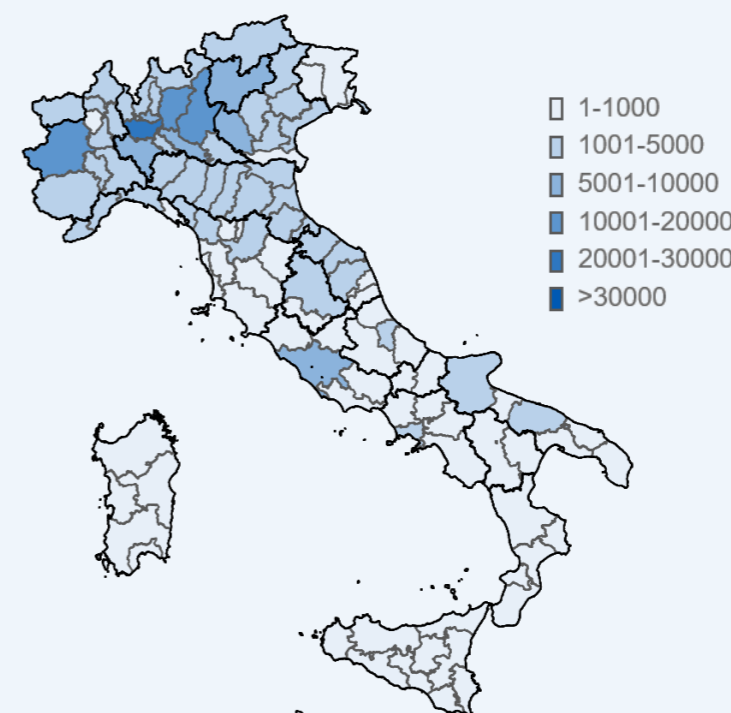

Data available for 35,167 cases

Total number of COVID-19 cases diagnosed by the Italian Regional Reference Laboratories

By Region/Autonomous Province of diagnosis

(data available for 225,549)

By province of residence

(data available for 222,179)

*The case definition considers as a confirmed case any person with laboratory confirmation of virus causing COVID-19 infection, irrespective of clinical signs and symptoms <https://www.ecdc.europa.eu/en/case-definition-and-european-surveillance-human-infection-novel-coronavirus-2019-ncov>

*ISS collects data on cases that tested positive for SARS-COV-2 infection diagnosed by all Italian Regions/Autonomous Provinces. Data could differ from aggregated data from the Italian Ministry of Health and the Italian Civil Protection. [§]The term "health-care worker" is based on the occupation and not on the place of exposure. [§]Case Fatality Rate
